

The Hazzard Service Check

Do you own a home or business?

Electrical safety should be a top priority in your home or business. According to the Electrical Safety Foundation International (ESFI), awareness of electrical hazards is the key to reducing the staggering number of electrically-related home fires, injuries and deaths that occur every year. Electricity is vital to every building, whether residential or commercial. While its importance cannot be underestimated, its danger cannot be taken for granted.

One way you can be sure your home or business is safe from electrical risks, is to perform a thorough examination of your entire electrical system. This is especially important if one or more of the following conditions apply:

- Purchasing a home or building
- When a home or building is 30+ years old
- Adding an appliance
- If a home or building has had a renovation

You need a Hazzard Service Check.

A Hazzard Service Check will provide a visual inspection and take temperature readings of your electrical panel(s). Hot breakers could mean the circuit is overloaded or has loose connections. We will check GFI breakers and receptacles to make sure they are working properly. In addition, we will check your smoke detectors to ensure they are operational.

Upon completion of your Hazzard Service Check, our inspector will provide detailed documentation of any issues. Our report will include areas in need of immediate attention, recommendations for improvements, and potential upgrade possibilities.
